4	146076	Amjed Abdullah Almosulhi

1. Website Structure and Purpose

Leftá is a static personal finance website developed in Part 2 of the COMP3700 term project. Its purpose is to provide users with a clear and simple interface for planning budgets, tracking expenses, setting savings goals, calculating loans, reading financial advice, and contacting the project team. The website keeps the same overall purpose from Part 1, which was to help users manage their money more effectively through organized financial tools and an easy-to-use layout.

In Part 2, the project moved from the planning and analysis stage into an implemented static website using HTML and CSS. The current version includes a consistent header, logo, navigation menu, page layout, forms, tables, and footer across the site through a shared external stylesheet. The website also uses responsive design so that it can adapt to desktop and mobile screens. The shared stylesheet defines the main color scheme, typography, spacing, cards, tables, forms, footer, and responsive behavior.

The current implemented structure includes these pages:

- Home (index.html)
- Budget (budget.html)
- Expenses (expenses.html)
- Savings (savings.html)
- Calculator (calculator.html)
- Tips (tips.html)
- About Us (about.html)
- Contact Us (contact.html)

2. Updates to Sitemap / Layout Compared with Part 1

In Part 1, the proposed website structure included several future dynamic pages such as registration, login, dashboard, transaction management, add/edit transactions, and budget control pages, as well as database-driven account features. It also discussed secure authentication, private accounts, recurring transactions, reporting, and exports as planned future functionality.

In Part 2, the sitemap was adjusted to match the requirement of building a **static** website only. Therefore, the implemented website does not yet include registration, login, or database-driven dashboards. Instead, those planned ideas were translated into static informational and interface pages that demonstrate the structure and visual design of the final project.

Main changes from Part 1 to Part 2:

- The original dynamic pages such as **Register**, **Login**, **Dashboard**, and **Add/Edit Transactions** were not implemented yet.
- These were replaced by static but meaningful pages such as:
  - **Budget Planner**
  - **Expense Tracker**
  - **Savings Goals**
  - **Loan & Savings Calculator**
  - **Finance Tips**
- The original concept and purpose remained the same, but the layout was simplified into a static prototype suitable for Part 2.
- The site now focuses on visual consistency, navigation, forms, tables, and responsive design rather than database processing.

So, the website purpose stayed the same, but the page structure was updated from a planned full finance system into a static front-end prototype for this phase.

---

3. Updated Title Page and Table of Contents

The title page from Part 1 should be updated to reflect that this is now **Part 2**, not just the initial proposal. It should include:

- Project title: **Leftá – Smart Finance Tracker**
- Course: **COMP3700 – Introduction to Web Computing**
- Project phase: **Course Project – Part 2**
- Submission date
- Team member names and IDs

The table of contents should also be updated to include the new report sections required in Part 2, especially:

- Website Structure and Purpose
- Updates to Sitemap / Layout
- Screenshots of Implemented Pages
- CSS Styling Usage
- Hosted Website and GitHub Links
- Team Contribution Table

Your Part 1 table of contents currently ends with the planning sections only, so Part 2 needs these extra implementation/report sections added.

---

4. Implemented Pages with Brief Description

4.1 Home Page

The Home page introduces Leftá as a personal finance platform. It contains the main hero section, key feature cards, statistics, testimonials, a comparison table, and quick links to the rest of the website. It acts as the starting point of the website and gives users a clear overview of the system.

4.2 Budget Page

The Budget page provides a monthly budget planning interface. It includes summary cards for income, expenses, and balance, a budget form with multiple input controls, and a budget breakdown table showing sample spending progress and status labels.

4.3 Expenses Page

The Expenses page allows users to log expenses using a form and review expenses through tables. It includes categories, payment methods, recurring options, notes, and a spending-by-category summary. This page represents the tracking side of the finance system.

4.4 Savings Page

The Savings page focuses on goal-based saving. It displays active savings goals using cards and progress bars, includes a form for adding a new goal, and provides a summary table of multiple goals and their completion percentages.

4.5 Calculator Page

The Calculator page provides a sample loan and savings calculator form. It includes user input controls for principal, rate, term, payment frequency, and loan type, plus a sample result area and amortization schedule table.

4.6 Tips Page

The Tips page provides financial education content. It includes six tip cards, a goals-based advice table, and additional informational sections such as glossary items and short financial awareness notes.

4.7 About Us Page

The About Us page explains the mission of Leftá, its values, and the team behind the project. It includes an email link and team member details, which satisfies the requirement for detailed information in the About page.

4.8 Contact Us Page

The Contact page contains contact information, FAQ content, and a full contact form. It also includes the GitHub repository link and explains that this version is static and that permanent data storage will be added in Part 3.

---

5. Where Each Type of CSS Styling Is Applied

The website uses all three CSS types required in the project.

5.1 External CSS

External CSS is applied through the shared style.css file. It is linked in all pages and is responsible for the common visual identity of the website, including:

- color variables
- fonts
- header and navigation
- logo styling
- cards
- forms
- tables
- footer
- utility classes

5.2 Internal CSS

Internal CSS is used inside the <style> tag in individual pages for page-specific elements:

- Home page: hero section and testimonial styling
- Budget page: summary cards and progress bars
- About page: team cards and values boxes
- Contact page: contact info boxes

5.3 Inline CSS

Inline CSS is used for small local adjustments inside specific elements, such as:

- margin spacing on buttons
- color styling on some amounts and small content blocks
- flex alignment and spacing on selected sections
- specific border or text adjustments in some form inputs and cards

---

6. CSS Selectors and Styling Features Used

The stylesheet and page files show a wide use of CSS selectors and property categories.

Examples of selector types used:

- Universal selector: *
- Type selector: body, h1, table
- Class selector: .card, .btn, .page-hero
- ID selector: #nav-menu
- Pseudo-class selector: a:hover, a:active, a:visited
- Pseudo-element selector: ::before, ::after
- Attribute selector: input[type="text"]
- Descendant selector: footer ul li a
- Grouping selector: h1, h2, h3, h4

Examples of CSS property categories used:

- Background properties
- Font and text properties
- Border properties
- Box model properties (margin, padding)
- Layout properties (display, flex, grid)
- Positioning properties
- Transition and shadow properties
- Responsive media queries

---

7. Hyperlinks to Hosted Website and GitHub Repository

Hosted Website:

Github-link

GitHub Repository:

The repository link shown in the Contact page is:

https://github.com/ahmadSQU/COMP3700_spring2026 (not working)

8. Team Contributions Table

Use the following table in the report:

Team Member	ID	Main Tasks / Contributions
Alkhalil Ahmed Alkharousi	146514	Project coordination, home page structure, content planning, integration of pages, overall review
Mohammed Rashid Al-Shukaili	146078	UI/UX design decisions, page styling support, About page content and visual consistency
Abdulrhman Khalfan Al-Degheshi	143052	Development of page structure, forms, tables, and technical implementation of website sections
Amjed Abdullah Almosulhi	146076	Financial content review, sample finance data, savings/budget logic content, quality assurance and testing

Short comparison summary: Part 1 vs Part 2:

Part 1	Part 2
Focused on analysis, objectives, stakeholders, database design, and future functionality	Focused on implementing a static front-end website
Planned login, registration, dashboard, secure accounts, export, and database features	Replaced those with static showcase pages that demonstrate the interface
Contained conceptual sitemap and system planning	Contains real HTML/CSS pages with navigation, forms, tables, and responsive design
Used Google Sites prototype as early concept	Now has coded website pages with a unified theme and shared stylesheet
Focused on “what the system will do”	Focused on “how the website currently looks and works in static form”

Financial Tips
Expert advice to help you save more, spend wisely, and build wealth over time.
Top 6 Financial Tips
01
Follow the 50/30/20 Rule
Allocate 50% of your income to needs, 30% to wants, and 20% to savings and debt repayment. This simple rule provides a balanced framework for budgeting.
02
Build an Emergency Fund
Aim to save 3-6 months of living expenses in a separate, easily accessible account. This protects you from unexpected events like job loss or medical emergencies.
03
Pay Yourself First
Set up automatic transfers to your savings account the moment your paycheck arrives. Treat savings like a non-negotiable expense, not an afterthought.
